DoMore Diagnostics secures EUR 10 million grant

The company DoMore Diagnostics has its origins in the Research Council of Norway's strategic ICT flagship projects, where DoMore! was one of three major groundbreaking initiatives.

The EIC grant represents a genuine external validation of our development plans, which we know can improve and save the lives of many cancer patients," says Torbjørn Furuseth, CEO of DoMore Diagnostic

DoMore Diagnostics AS streamlines and provides decision support for cancer diagnostics and has now received a significant grant from the European Innovation Council (EIC). The EIC recently announced funding of up to 10 million euros (approximately 115 million Norwegian kroner) to Oslo-based DoMore Diagnostics AS for developing new technology capable of analyzing cancer tumors, providing precise prognoses, and personalizing treatment. Leveraging artificial intelligence and digital biomarkers, they aim to extract and utilize information from tumor tissue

that is not visible to the human eye. The EIC is a funding program under the EU's Horizon Europe framework, supporting radical and pioneering innovation and technology.
